Patent No. 6465716

GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Btzler, Marilynn E.
APPLICANT: The Regente of the University of California
APPLICANT: The Regente of the University of California
TITLE OF INVENTION: A No. 6465716 Factor Binding Protein From Legume Roots
FILE REFERENCE: 023070-079810US
FILE REFERENCE: 023070-079810US
CURRENT APPLICATION NUMBER: US/09/129,112
PRIOR APPLICATION NUMBER: US 08/907,226
PRIOR FILING DATE: 1999-08-06
NUMBER OF SEQ ID NOS: 19
SOFTWARE: PatentIn Ver. 2.1

ACMNPV orf19 - Bombyx mori nuclear polyhedrosis virus (isolate T3)

C,Species: Bombyx mori nuclear polyhedrosis virus (isolate T3)

C,Species: Bombyx mori nuclear polyhedrosis virus, BmSNPV

A; Variety: isolate T3

C,Date: 03-Dec-1999 #sequence_revision 03-Dec-1999 #text_change 09-Jul-2004

C,Accession: T41165

R; Gomi, S.; Maeda, S.

J. Gen: Virol. 80, 1323-1337, 1999

A;Title: Sequence analysis of the genome of Bombyx mori nucleopolyhedrovirus.

A;Recence number: Z22020; MUID:99281911; PMID:10355780

A;Accession: T41765

A;Status: preliminary; translated from GB/EMBL/DDBJ

"Expression of a novel isoform of cyclin I in human testis.";
"Expression of a novel isoform. 2455-60(1998).
Biochem. Biophys. Res. Commun. 2455-60(1998).
-- TISSUE SPECIFICITY: Highest levels in adult heart, brain and skeletal muscle. Lower levels in adult placenta, lung, kidney and pancreas. Also high levels in fetal brain and lower levels in fetal lung, liver and kidney. Also abundant in testis and thyroid.
--- DEVELOPMENTAL STAGE: Expression is independent of the cell cycle
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 6449, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

APPLICATI VENTER, J. Craig et al.

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

TITLE OF INVENTION NUMBER: US/09/949,016

CURRENT APPLICATION NUMBER: 60/241,755

PRIOR PELLOATION NUMBER: 60/241,755

PRIOR PAPLICATION NUMBER: 60/231,498

PRIOR APPLICATION NUMBER: 60/231,498

PRIOR PAPLICATION NUMBER: 60/231,498

PRIOR PELING DATE: 2000-10-03

PRIOR PELING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FASTESQ for Windows Version 4.0
